
File Permissions: cgi-fcgi

Posted by PTO - 2009/08/27 21:16

I see that others have had this problem. Has anyone found a solution?

I'm using PDF Indexer 2.4 in Joomla 1.5.14 running legacy mode. Everything works fine on a local host, but when I installed it on a Linux server I got a file permissions warning (cgi-fcgi).

I tried indexing files but it fails with warnings on `set_time_limit()`, `popen()` and `pclose()` in `admin.file_index.php`

Can anyone advise me on whether this can be fixed, and if so how please?

Mike

I think I've found the answer to my problem. My web site is hosted on a shared server, and the ISP has disabled `popen` "for security reasons". They won't enable it for me, so perhaps I should look for another ISP. :angry:
