

Will PDF Indexer work with all versions on Joomla or Mambo?

We have tested it with the latest version of Joomla and Mambo running on linux and Windows servers. It should work with version 4.5.2 and beyond of Mambo and Joomla 1.0 - 1.5 (in legacy mode).

It will not work with prior versions of Mambo or on servers running in safe mode or with Popen turned off.

PDF Indexer 2.0 has been tested on both Linux and Windows platforms.
